Cottage Security Video

GuardDog's Cottage Video Security System is designed for the year-round or summer only lake homeowner who is interested in securing their property. Our packaged system comes with up to eight (8) cameras, is shipped with a full set of instructions and is designed to be installed by the average home owner using simple hand/battery powered tools.

Our professional installation is optional.

Our Cottage Series DVR simultaneously records one to eight cameras and can be viewed live in quad (four per screen) or full screen mode. The Digital Recorder's built in motion detection puts the system in record mode only when a camera detects motion – saving valuable storage space and increasing your days of stored video.

A time and date event search allows for quick location of important video. An Ethernet port allows our **Cottage Series** DVR to connect to your home network or broadband service (cable or DSL) for viewing, playback and remote control via the Internet.

We've selected cameras that are widely functional for indoor or outdoor use – each are Infrared (I/R) equipped for daylight or night-vision operation. An optional camera (with a narrow field of view 9mm-22mm zoom lens) is available for long range subject viewing and recording.

Wiring is a breeze with our included cables – complete with connector terminated ends. Just mount your cameras, run your wire and plug in the DVR and you'll be up and running!

Cottage Video Security – Packaged System
